

## Matrix Report Widget Filters

Aerotrac Connect has a reporting feature that allows users to see their ship-counts and spend based on various criteria.

To access this report, click on the 'Reports' menu, and select 'Report Matrix.'

Users will be presented with four widgets:

- Upper-left – 'Shipment Count by Order Type'
- Upper-right – 'Shipment Count by Service Level'
- Lower-left – 'Spend by Service Level'
- Lower-right – 'Spend/Ship Count by Lanes'

## Shipment Count by Order Type:

This widget shows the number of shipments, based on ship date, over the course of the number of months selected. Note that the filter for the number of months allows users to select up to 12 months. (3 months is the default.)

The different order types are:

- Domestic
- Air Export
- Air Import
- Ocean Export
- Ocean Import

## Shipment Count by Service Level

Much like the previous widget, this one shows the number of shipments by service level, based on ship date and the number of months selected.

The **Spend by Service Level** widget works in the same way ...

... but note that the financial amounts are based on billed orders.

### Spend/Ship Count by Lane

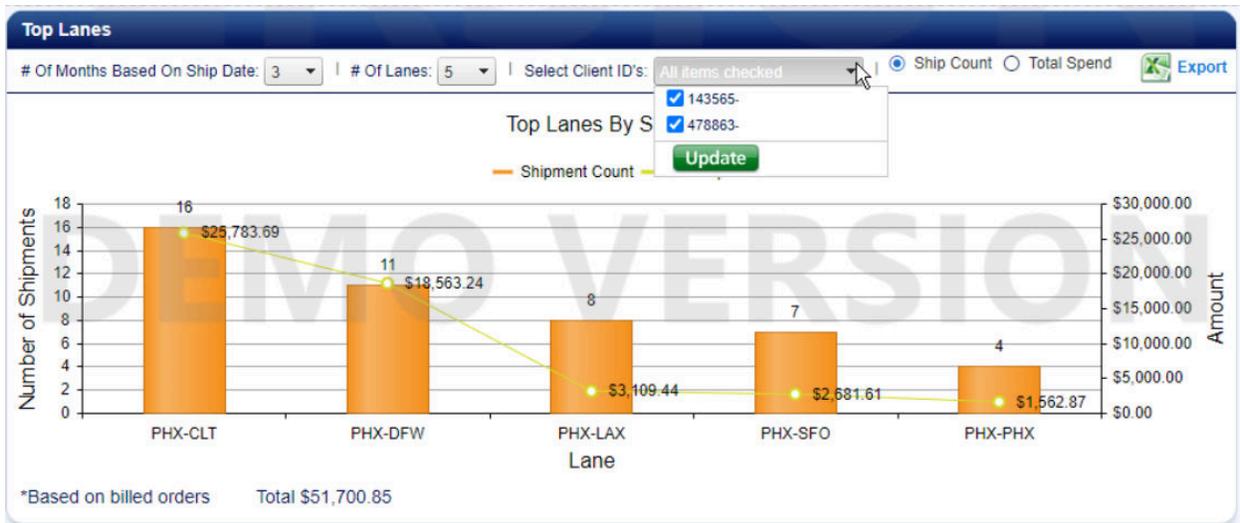

This widget is a little more complex, as it will show the top lanes based for either shipment count or total spend.

Users have the ability to filter by the number of months and the number of lanes.

There is also a toggle button that will allow the user to switch between ship count and total spend.

All widgets have an export feature that will allow the user to export the raw data in Microsoft Excel format.

In addition to filtering by the number of months, each widget has the ability to display data associated with a specific account number. This comes in handy if the client were to have multiple account numbers with Aeronet.

By default, all account numbers are selected. To remove, just deselect any account number, and click the 'Update' button.
